HFI-DPT-05

ALTAIR HANDHELD PROGRAMMING UNIT

The HFI-DPT-05 handheld programming unit allows you to set all of the programmable variables from the Altair device range including the loop address, read the analogue value from a device or change the heat detector setting from rate of rise to high temperature.

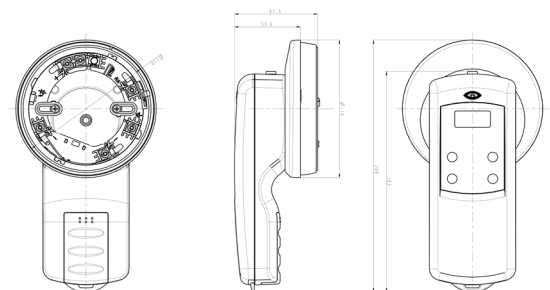

When used with the connection lead you can program/read in information from call points and sounders adding loop addresses or program one of the sounder's 32 operating modes.

KEY FEATURES

- Easy to use
- Clear device display
- Auto shut-off to save battery
- Displays the sensor analogue values
- Includes the programming cables for backward compatibility
- 5 year product warranty
