OUTPUT VOLUME SETTING

Use the DIP switch inside the sounder body for setting the output volume; in particular, switches 6 and 7 are used. The switches positioned upwards acquire value "1" or when positioned downwards acquire value "0".

Refer to table below and set the position of both switches 6 and 7 according to the required volume when the sounder is active.

HIGH	1	1
MEDIUM HIGH	0	1
MEDIUM LOW	1	0
LOW	0	0

OUTPUT TONE SETTING

Use the DIP switch inside the sounder body for setting the output tone; in particular, switches 1 to 5 are used. The switches positioned upwards acquire value "1" or when positioned downwards acquire value "0".

Using the DIP switches it is possible to select a tone between 1 and 32. Utilises the Standard or Alternative wiring connections determines whether this tone is selected from the Standard tone table (Page 3), when the sounder is activated.

*Note: Not all functionality may be available on all control equipment. Contact technical support for specific advice.

OUTPUT VAD INTENSITY

Use the DIP switch inside the sounder body for setting the output VAD intensity; in particular, switch 8 is used. The switch positioned upwards acquires value "1" - **HIGH** intensity and when positioned downwards it acquires value "0" - **LOW** intensity.
